

JULY 2024 Theme – Summer Safety Toolkit

As we approach the summer months, water increasingly becomes an attractive place for young people to gather socially. Unfortunately, these comes with the risk of unsafe thrill-seeking which is often influenced through peer pressure.

What does it do?

In this month's toolkit, I have identified some national schemes and other information to support you to get you fire cadets to look at some of the potential hazards that they or their friends might face during the summer months

#ChallengeAccepted

Work with the cadets to identify some of the hazards they might come across, identify the risks, and suggest appropriate control measures.

Peer pressure is often associated with unwanted and unsafe behaviour and being the one person who doesn't follow the crowd can be hard to do. Use these link to try and encourage young people to make the right decisions:
